

FISCO SOLATRONIC INCLINOMETER

A DEGREE OF LEVELLING ALIGNMENT

Accurate measuring of angles and gradients

PRECISION ALIGNMENT

Quick and precise measuring with the Fisco Solatronic digital inclinometer.

The Fisco Solatronic digital inclinometer allows for the accurate measuring of angles and gradients in 0.1 increments, in either degrees (from 0° to 360°) or as a percentage. It's the ideal instrument to use for all those building projects that require some degree of levelling alignment.

The inclinometer is highly accurate and simple to use. Overhead measuring and the measurement of sloping ceilings or similar, is made really easy with the unit's reverse reading capability. In addition, for the measurement of gradients in areas where the display cannot easily be read, there is a hold button which will maintain the measured value, allowing the display to be read away from the job.

Features & benefits

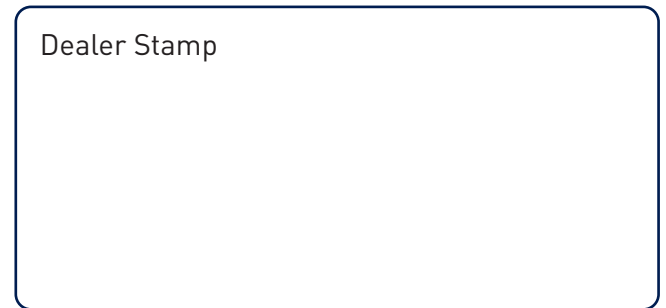

- Precise gradient measurements
- Liquid crystal display
- Low battery indicator
- Quick and easy to use
- Audible alarm (beeps at 0° and 90°)
- Automatic switch off (after 6 minutes)
- Hold button to retain measured value
- Easy change over of units displayed (° or %)
- Reversible reading for inverted measuring
- 1 x 9V PP3 battery supplied (approx. 20hrs operation)

Specification and order code

UNIT DIMENSIONS	BARCODE NO	ORDER CODE
167 x 5 x 35mm	5 013623 500586	EL-MD-EN17

The Solatronic digital inclinometer is supplied in an individual hanging carton, complete with user manual and guarantee certificate.
